White Spruce	3 yr. " 3-5 "	5½¢	5¢
Douglas Fir	3 yr. " 3-5 "	6¢	5½¢

Christmas Trees are a well worth while crop, - good trees are scarce and hard to locate - pay up to \$1000 per acre, using unimproved and waste farm land. The annual cutting amounts to around 30 million trees, value of business estimated at 50 million dollars.

"The Christmas Tree is a thing of wonder and beauty to children and adults alike."

This image shows a blank, aged, cream-colored page, likely an endpaper or flyleaf from an old book. The paper has a slightly textured appearance with some minor discoloration and faint horizontal lines near the top edge, possibly from the binding or scanning process. There is no text or other markings on the page.

1. The first step is to identify the key components of the system. This includes understanding the hardware, software, and data involved.

2. The second step is to analyze the system's performance. This involves measuring various metrics such as response time, throughput, and error rates.

3. The third step is to identify the bottlenecks in the system. These are the areas where the system's performance is most degraded.

4. The fourth step is to implement optimizations. This can involve upgrading hardware, optimizing software, or changing the data structure.

5. The fifth step is to monitor the system's performance after the optimizations. This helps to ensure that the optimizations are effective and that the system is running smoothly.

—PLANTING SUGGESTIONS—

Planting . . .

Dig holes large enough to accomodate the root of the tree or plant. Cut away broken or unusually long roots, trim canes out of top; about one-third of top to be removed. This applies to fruit trees, shade trees and flowering shrubs only.

Setting . . .

In setting plants and trees plant about one to two inches lower than plan grew in nursery; grafting knuckles should be well covered in the tree hole.

Protecting Roots . . .

Always keep roots of trees and plants covered as a protection from sun and wind. Not necessary to carry plants in a pail of water. This tends to harden the roots—roots also dry out faster when lifted from water. If allowed to stand in water roots will become water soaked.

Watering . . .

In transplanting use water when setting or after the planting hole has been back-filled. Loose soil needs to be settled with water. Important! Do not water plants too much—well watered once each week or ten days is sufficient. Turn your hose on young roses once each week. This will keep the foliage free from disease.

Time . . .

Watering at night is best—morning applications tend to get dried and baked by the sun.

Fertilizing . . .

Very important to supply plant food for any newly set plant. The best and safest fertilizer is, no doubt, barnyard manure or cow manure. Use well-rotted, well-pulverized material, sprinkling in the bottom of the hole. Cover with one or two inches of good top soil before setting the tree or plant. After the dirt has been filled in around the roots use one or two shovels of manure over the dirt on roots to be covered by the back-fill.

Fertilizer Warning . . .

If you are using commercial fertilizer around your tree be sure to use no more than one tablespoon per plant. Many trees are lost by over-fertilizing, also over-watering.

Mulching . . .

Use compost, weeds, sods, manure or Peet moss, covering the ground about the newly set tree.

Planting Christmas Trees . . .

When your Christmas trees arrive from the nursery, open the crate or package. Dip the roots in a dish of very heavy mud, lay the trees in a shallow trench and cover with fine top soil. Do not cover foliage. Your trees will be O.K. for several days. Take trees from trench only as needed. If you are planting in a grassy field use mattock or pick-ax to make the holes, insert tree roots, stepping on dirt, setting about one inch lower than tree grew in nursery.

Distances Apart . . .

Plant 6½ feet apart, 1000 per acre . . . 4½ feet apart, 2000 trees per acre. Well to line out the field with stakes using a line for guide, always planting on the same side of the line.

Letter sent out Jan. 22-53.

Dear Sir—

Replying to your postal we believe White Spruce and Scotch Pine are two of the best Christmas Trees to plant. White Spruce grows into beautiful gray-green specimens. Needles hold on very good. Scotch Pine is in great demand at fancy prices, grows bushy, needles do not drop.

Blue Spruce, Black Hill Spruce and Norway Spruce Christmas trees are in good demand, they can be planted with profit in limited quantities. Balsam and Douglas Fir are No. 1 Christmas Trees.

Trusting that we may be of further service.

Very truly,
UNADILLA NURSERY CO.
